

QUBEATHON 2026 --- Problem Statements & Resources

Welcome Participants! Choose one of the problem statements below and build a working solution.

Problem Statements:

PS01 --- Detecting Misuse of BIS Standard Marks

Problem:

BIS receives complaints about unauthorised or misleading use of the BIS Standard Mark across product packaging, advertisements, online listings and retail channels. Identifying potentially misleading claims from large volumes of visual and textual information is difficult and time-consuming.

Challenge:

Develop a method to identify and substantiate potentially unauthorised or misleading BIS conformity claims from real-world product and advertisement information.

PS02 --- Mapping Products to Applicable BIS Requirements

Problem:

BIS operates multiple conformity-assessment schemes, while government-issued QCOs make compliance mandatory for specific products.

For a manufacturer introducing or modifying a product, determining the applicable standard, certification scheme and mandatory requirements can be difficult.

Challenge:

Develop a reliable way to determine the relevant BIS requirements for a product based on its characteristics and intended use.

PS03 --- Prioritising BIS Enforcement Cases

Problem:

BIS enforcement teams may receive information about potential violations through complaints, advertisements, consumer associations and other sources.

Not every case has the same potential impact, urgency or level of evidence.

Challenge:

Develop a transparent method for prioritising potential enforcement cases based on factors such as consumer impact, evidence strength, product risk and recurrence.

Reference Resources:

These links are starting points for research. Teams may use other reliable sources and datasets where appropriate.

- **PS01** : <https://github.com/BIS-Standards-AI-Assistant/BIS-standards-dataset>
<https://www.bis.gov.in/enforcement-activities/?lang=en>
- **PS02** : <https://www.bis.gov.in/product-certification/products-under-compulsory-certification/?lang=en>
<https://github.com/BIS-Standards-AI-Assistant/BIS-standards-dataset>
- **PS03** : <https://www.cpsc.gov/Data>

Important: *The provided resources are references, not a complete, labelled dataset of BIS cases. Verify standards and regulatory details using official BIS publications. Participants must cite their data sources and clearly label any sample or synthetic data. If suitable real-world data is unavailable, participants may prepare their own sample or synthetic datasets.*

What to Submit:

- A working prototype or demonstration.
- An explanation of your approach and how to use the solution.
- The datasets or reference sources used.
- Key assumptions and limitations.

Notes

- Focus on a practical, explainable solution to the selected problem.
- Protect personal or confidential information; do not publish it in your demo.
- Do not present predictions or flags as confirmed violations. Treat them as items requiring verification.
- Follow the hackathon organiser's submission instructions and deadlines.

Official Rules & Regulatory References

- **BIS Act, Rules and Regulations:** <https://www.bis.gov.in/the-bureau/bis-act-rules-and-regulations/?lang=en>
- **BIS Enforcement Guidelines:** <https://www.bis.gov.in/wp-content/uploads/2025/05/Guidelines-for-Enforcement-Activity.pdf>
- **BIS Consumer Protection:** <https://www.bis.gov.in/consumer-overview/consumer-protection/?lang=en>

Participants should refer to the latest applicable official publications when interpreting standards, certification requirements, or potential violations. Projects are for hackathon demonstration purposes and do not constitute official BIS certification, legal advice, or enforcement decisions.
